Free Wi-Fi Manual

If using locally, the user must have a Visual studio code and strong internet connection. The user must install the following software in order to run the system:

- Node.js (Latest version)
- PostgreSQL (Latest version)

Then, the user must install the following dependencies in order for the system to run in your computer/laptop:

- Express
- React-router-dom
- Mapbox-gl-geocoder
- Axios
- Cors
- Tailwindcss @tailwindcss/vite
- Recharts
- Framer-motion
- Lucide-react
- Html2canvas

When installing these dependencies, the user must open the terminal and execute this code “npm install <dependency>. Also take note of these two dependencies that need specific code like “npm install -D”

- Tailwindcss postcss autoprefixer
- vite

Now, after you install all the dependencies, the user must open another terminal and type “cd server” then type “node server.js”.

```
PS C:\Users\dusti\freewifisystem> cd server
PS C:\Users\dusti\freewifisystem\server> node server.js
Server running on port 5000
Connected to PostgreSQL database at: 2025-07-03T16:50:22.974Z
Location and site tables created or already exist. Sequences reseeded.
```

This line of command opens the server and the user has now access to the database of the system. Then, the user must open another terminal and type “npm run dev”, this will open the frontend side.

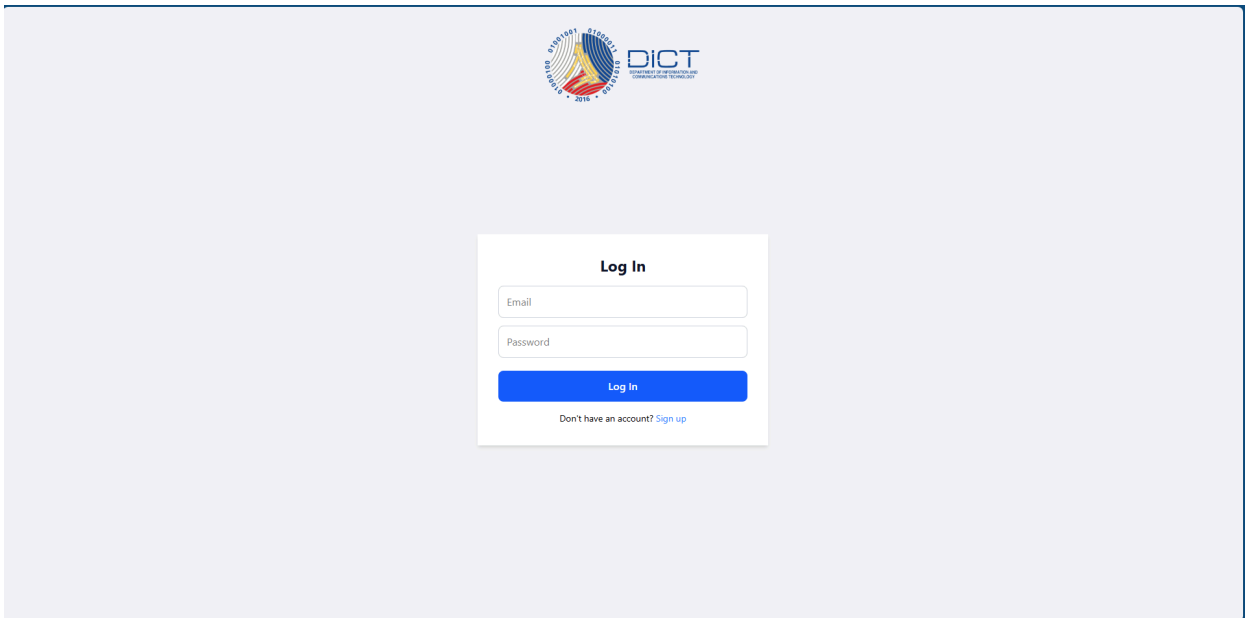
```
PS C:\Users\dusti\freewifisystem> npm run dev

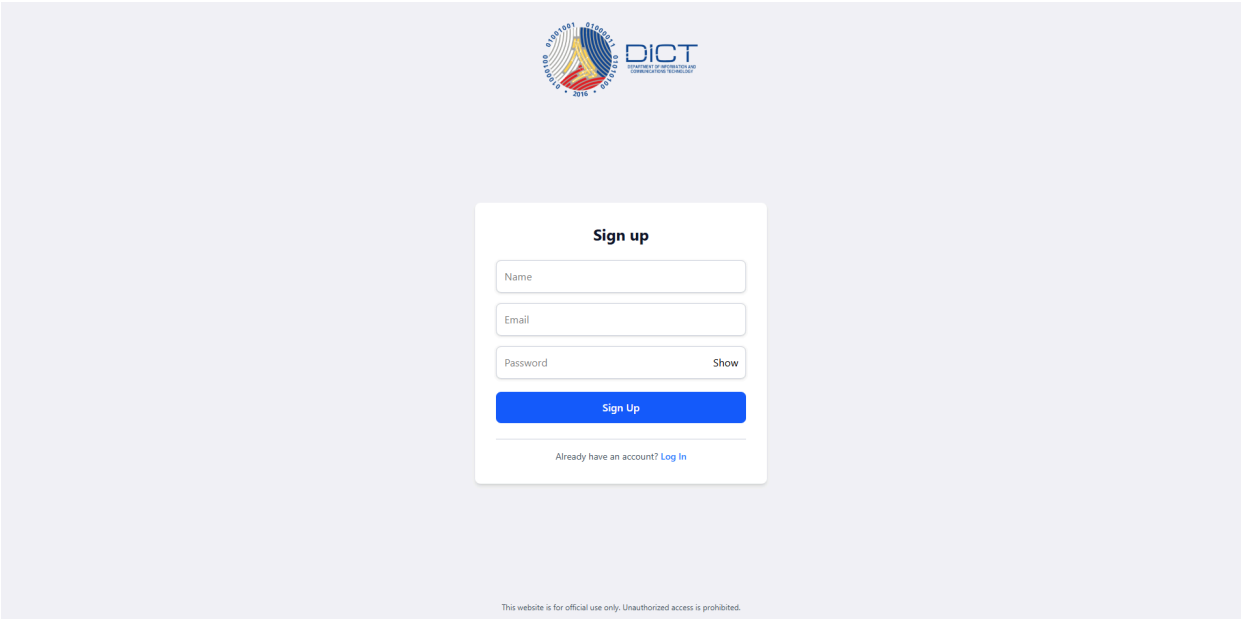
> freewifi@0.0.0 dev
> vite

  VITE v6.3.5  ready in 3118 ms

  ➜  Local:   http://localhost:5173/
  ➜  Network: use --host to expose
  ➜  press h + enter to show help
```

Now click the link to access the system. The user will be redirect to our login page





After signing up, then login, the user should be redirected to our dashboard alongside with our maps, wifi list, and add wifi location.
